

Altherma Mono-Bloc

Hydronic heating
and cooling system

The secret to consistent, controllable comfort

There's nothing better than walking into a warm and cozy home during the colder months. While many conventional air conditioning systems provide effective heating, it can often be challenging to maintain a steady temperature, particularly in large areas such as living rooms. In addition, they may create draughts and potentially dry out the air inside the home.

One of the most energy efficient and environmentally friendly ways of achieving even, radiant and draught-free heat is to install a hydronic heating system. Rather than heating and blowing hot air through your home, a hydronic heating system heats the liquid in its system, distributes it through tubes, and radiates the heat evenly.

Choose Daikin Altherma for optimal comfort

Daikin Altherma is a highly flexible, energy efficient home heating system that connects to a range of common heat emitters such as underfloor heating systems, radiators and fan coil units. Available in heating only or reverse cycle

(heating and cooling) options, and ideal for installation in new home builds as well as during renovations, Altherma creates the optimal temperature for you and your family.

Benefits you can feel

Efficient heating

Altherma utilises free heat from the ambient air to maintain ideal comfort conditions in your home. In addition, the inverter technology inherent in Altherma means your energy savings are even greater.

Safe

Altherma works without the need for oil, flammable gas (LPG, Natural) or other hazardous substances thus reducing the potential risks that these fuels can create. Furthermore, there is no need for a gas connection or a fuel tank.

R32 refrigerant

R32 refrigerant, used in the heat transfer process, is the next generation in refrigerants with 66% lower 'Global Warming Potential Factor' than R410A, providing less risk of harm to the environment.

Flexible connection

Compatibility with a range of third party fan coils, radiators and underfloor heat emitters ensures the optimal solution can be tailored to your home.

Powerful operation

Even in the coldest weather, the Altherma system is still able to extract heat energy from the ambient air. In the event there is insufficient heat in the outdoor air, Altherma is equipped with a back up heater to cover the shortfall.

Zone control

System controller offers the ability to control the individual water temperature of up to two zones or emitters - ideal for meeting the varying cooling or heating needs of occupants.

Why Daikin?

- 1 Market Leader**
Daikin is the global No. 1 in air conditioning. We have been delivering effective and innovative climate control for Australian homes for over 50 years.
- 2 Quality Products**
Our wide range is based on a tradition of technological and design excellence and includes solutions for any home environment.
- 3 5 Year Warranty**
Daikin Altherma systems are backed by a 5 year warranty and a national after-sales support team to ensure your system runs smoothly for years to come.

Altherma system components

A compact outdoor unit extracts heat energy from the ambient air, raises this heat to a higher temperature and then distributes this warmth throughout your home through heat emitters.

With our new R32 based refrigeration cycle, this highly efficient process requires only 1 kilowatt of electrical energy to release in excess of 4 kilowatts of heat into your home.

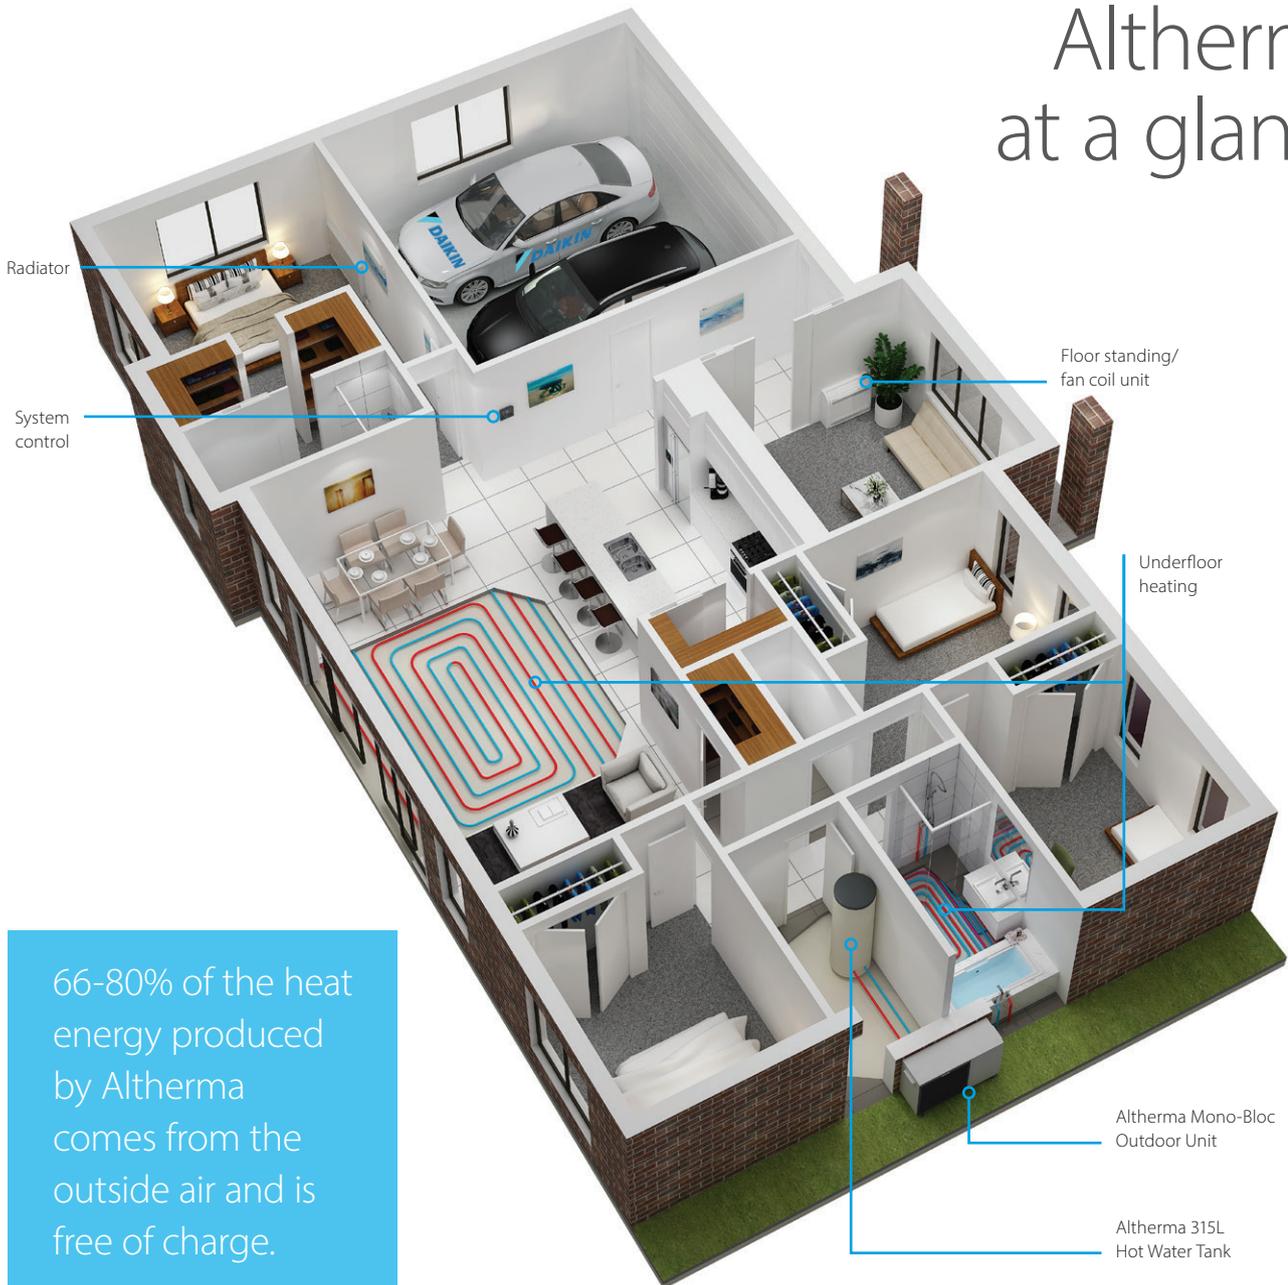

To cool the home, the reverse cycle option extracts heat from inside the home and releases it outside.

An optional domestic hot water tank can be integrated into the system to satisfy the home's hot water needs making Daikin Altherma a total home heating solution.

Finally, the wired system controller offers many useful features including the ability to control the individual water temperature of up to two zones or emitters - ideal for meeting the varying cooling or heating needs of occupants.

Altherma at a glance

66-80% of the heat energy produced by Altherma comes from the outside air and is free of charge.

ASSUMPTIONS

All representations made in Daikin marketing and promotional material are based on the assumptions that the correct equipment has been selected, appropriately sized and installed in accordance with Daikin's installation instructions and standard industry practices.

QUALITY CERTIFICATIONS

Daikin Industries Limited was the first air conditioning equipment manufacturer in Japan to receive ISO 9001 certification. All Daikin manufacturing facilities have been certified to ISO 9001 Quality Management System requirements. ISO 9001 is a certificate for quality assurance concerning 'design, development, manufacturing, installation and related service' of products manufactured at that factory.

ENVIRONMENTAL CERTIFICATIONS

Daikin Industries Limited has received ISO 14001 Environmental Certification for the Daikin production facilities listed below. ISO 14001 is an international standard specifying requirement for an environmental management system, enabling an organisation to formulate policy and objectives, taking into account legislative requirements and information about significant environmental impacts. It applies to those environmental aspects within the organisation's control and over which it can be expected to have an influence.

The certification relates only to the environmental management system and does not constitute any endorsement of the products shipped from the facility by the International Organisation for Standardisation.
